

Use Case Document - Custom GPT

GPT Name

HR Policy Assistant

Target users

- ** primary users: ** All employees at A&D logistics who need quick answers about leave, holidays, and reimbursements.
- ** secondary users: ** New hires during onboarding, who often don't know where to find HR policies.

Problem statement

Employee frequently message the HR and IT team to ask about leave balances, the holiday calendar, and reimbursement status. This creates repeated interruptions for HR staff and delays response for employee, since the same handful of questions are answered manually, one at a time, every day.

Expected Outcomes

- Reduce repetitive HR/IT queries by 50% within 2 months of launch.
- Achieve 80% of employee using the GPT instead of messaging HR directly for these 3 topics.
- Free up ~5 hours per week of HR staff time currently spent answering repetitive questions.
- Cut average response time for these queries from 4 hours (human reply) to under 1 minute (GPT reply).
